

Press Release / Pictures

i-close – Picture 1

No free hand and the door in the first position – without the i-close fitted, only a hip swing can close the door completely.

i-close – Picture 2

If the passenger leaves the car without fully closing the door, the driver must stretch out to reach the passenger door.

i-close – Picture 3

Children in particular may find it difficult to fully close a door. With the i-close fitted, a soft pushing is enough to close the door automatically.

i-move – Picture 1

With the i-move fitted, no driver needs to reach out for the door. With the mere press of a button, the door closes automatically.

i-move – Picture 2

A fully opened door may be a non-manageable distance for children

i-move – Picture 3

In confined spaces, opening a door can result in damage to the door surface. The i-move technology incorporates a feature which holds the door securely at any position desired and thus preserves the door surface
