safeLIGHT: SAFETY IN SIGHT

The Kiekert safeLIGHT provides extra safety and increased design possibilities for any vehicle. As an integral component of the latch, the door warning light is visible to approaching traffic, almost across the entire door opening radius. This greatly reduces the risk of open-door collisions. The Kiekert safeLIGHT can be used in any type of vehicle and is also applicable in Kiekert trunk latches. As part of the lighting concept of modern vehicles, it offers both more safety and individual design.

BENEFITS AT A GLANCE

- › Integration in Kiekert latches
- › No extra installation effort
- › Less parts (conventional warning light can be eliminated)
- › Reduced number of interior trim versions
- › Possible replacement for existing ambient lighting

EVERYDAY ADVANTAGES

- › Early warning of approaching traffic
- › Increased road safety
- › Design feature
